

RESUME Marc Darenz Masarate Graduate Civil Engineer Civil Construction Design	LOCATION Melton VIC 3337	SHEET 1 of 2
	AVAILABILITY FIFO and regional travel	UPDATED Sep 2026
0478 764 077 macdarenz@gmail.com		
Drawings, projects and how I work: macdarenz-droid.github.io/Portfolio		
◇ Subclass 485 visa: full working rights until December 2027 ◇ Australian driver's licence and own reliable transport ◇ White Card (Construction Induction)		

Professional profile

Civil Engineering graduate (BSCE, Philippines) with an Australian Advanced Diploma of Civil Construction Design and practical site experience in the Philippines supporting construction delivery, site coordination and quality inspections. Experienced in reviewing structural and architectural drawings, supervising site activities, maintaining progress and material records, and coordinating with engineers, subcontractors, suppliers and clients. Academic design experience includes earthworks, road geometry, pavement design and stormwater drainage. Brings a practical approach to problem-solving, accurate documentation and a strong willingness to develop under experienced civil engineers.

Key capabilities

- **Civil design:** earthworks, road geometry, pavement design, stormwater drainage and civil documentation
- **Project coordination:** planning each day's work, coordinating crews, tracking procurement and keeping material records
- **Stakeholder communication:** working with engineers, subcontractors, suppliers, clients and site crews
- **Construction support:** site inspections, progress monitoring, quality checks and safety observations
- **Technical documentation:** reviewing drawings, writing site reports, keeping progress records and flagging issues
- **Software:** AutoCAD 2D/3D, Civil 3D, Revit, Microsoft Office and Google Workspace

Relevant experience

Project-in-Charge Engineer (Entry Level)

Apr 2019 – Sep 2019

JustBuilt, Philippines

- Helped deliver a community hall renovation worth about PHP 1 million (AUD 22,000+), finished within the six-month construction program.
- Coordinated 10–15 workers each day, passed on work priorities and tracked progress to help the site run safely and efficiently.
- Reviewed structural and architectural drawings and checked work against project requirements to cut down on errors and rework.
- Carried out site inspections, safety checks and quality monitoring, and escalated issues that needed clarification or corrective action.
- Kept clients and other stakeholders up to date on progress throughout the job.

Field Engineer

Sep 2019 – Feb 2020

Grand Travaux, Philippines

- Worked on residential subdivision finishing works worth about PHP 1.2 million (AUD 27,000+), delivered within the three-month construction schedule.
- Assisted with site inspections, daily coordination and quality checks to keep work compliant and on time.
- Tracked procurement and materials, and prepared site reports, material records and progress reports.
- Coordinated with engineers, subcontractors and suppliers to sort out site issues and keep work moving.

Education

Advanced Diploma of Civil Construction Design

Feb 2024 - Feb 2026

Albright Institute of Business and Language, Australia

- Designed and documented road geometry, earthworks, pavement systems and stormwater drainage, and studied infrastructure design principles.
- Prepared and reviewed technical drawings in AutoCAD and Civil 3D, applying Australian Standards and construction requirements.
- Gained a practical understanding of design coordination, constructability, technical reporting and how civil works move from concept to documentation.
- Lodged Before You Dig Australia (formerly DBYD) enquiries, followed its procedures, and designed around existing services and site constraints.

Bachelor of Science in Civil Engineering

2014-2019

Divine Word College of Legazpi, Philippines

- Studied civil engineering design, construction methods, structural principles, hydraulics, surveying and project delivery.

How I work

FROM ADVANCED DIPLOMA COURSEWORK

1 Brief and scope Write down the scope, limits and what the design must show, then plan the work with review points and a schedule. In a team, set who owns each task and what "done" means.	2 Site data Published traffic volumes, geological maps, council drainage records and Before You Dig Australia enquiries I lodged myself. Vegetation mapped from satellite data.	3 Standards Before designing, list the Austroads guides and standards (AS, AS/NZS, ISO) that apply to the task.
4 Options Compare more than one option and write down why one was chosen over the others.	5 Calculations and costs Hand calculations, including structures by equilibrium and the method of joints, quantities and cost estimates or bills of quantities.	6 Risk and review Risk register rated by likelihood and consequence, checks against the brief, and dated revisions that act on feedback.
Austroads road and pavement guides AS 1742.14 AS 1726 AS 1289 AS 4100 AS/NZS 1170 ISO 31000 Options analysis Cost estimates and BOQs Risk registers		

Additional professional experience

Technical Support Representative – Microsoft Software

Mar 2020 - Apr 2022

Concentrix, Philippines

- Resolved 40–60 technical cases a day, troubleshooting step by step and keeping accurate case notes.
- Explained technical issues to customers in plain terms and worked with internal teams to fix complex problems.

Licences and work eligibility

- Australian driver's licence and own reliable transport
- Working with Children Check
- Available for site, office and regional project work
- White Card (Construction Induction)
- Subclass 485 visa: full working rights until December 2027
- Available for FIFO work and project-site travel across Central Queensland

Professional strengths

Clear communicator · Organised and dependable · Practical problem-solver · Strong attention to detail · Comfortable working on my own or in a team · Open to mentoring and keen to keep learning
